

Field Exercise Instructions

- 1. Find your Group:** Located on the top right-hand corner of this sheet.
- 2. Head out to your first site** as shown in the table below (see map for site locations), then continue around the room clockwise.

Group	Starting at...
A	Building Damage Example (LA)
B	Building Damage Example (Napa)
C	Geotechnical Example (San Diego)
D	Lifeline Impact Example (San Diego)

- 3.** At each site you'll find a poster showing mock earthquake damage from a region in California. The poster contains all the information you need to record your observations. At each site, do the following:
 - a. Discuss damage/impacts with your group members
 - b. Complete and upload observation using your desired/preferred tool (e.g. Spot-On-Response, Clearinghouse Fieldnotes).

**This should be done by each team member based on their own disciplinary expertise. You may want to use several tools during the exercise to practice each one -- feel free to do so.*
- 4.** Once you have completed all sites, head back to your seats.
- 5.** 15 minute break
